Profile

Final-year Computer Engineering student at ENSA Al Hoceima, seeking a PFE (graduation internship) to apply my skills in Full Stack development, Artificial Intelligence, and complex process automation.

Experience

- Full Stack Developer (Intern) | ONCF – Fès Maintenance Unit** Aug. – Sept. 2026
 - Designed and developed a predictive maintenance platform for measurement and control instruments (Angular, Node.js/Express, PostgreSQL).
 - Built an AI microservice (Python, FastAPI) to compute a risk score using business rules and an experimental classification model (scikit-learn).
 - Implemented an interactive scheduling calendar (drag-and-drop) and an automated email notification system (Nodemailer).
 - Set up secure authentication (JWT, bcrypt hashing) and role-based user management (technician / quality manager).
- PFA Internship in Automation | IZEMX** July 2026 – Aug. 2026
 - Automated and optimized business workflows through the interconnection of third-party APIs (WhatsApp, Gmail, Slack, Odoo).
 - Developed smart scripts for automated management of sales, financial, and customer support flows.
 - Set up data pipelines for operational monitoring and real-time performance analysis.
 - Wrote technical documentation for the workflows and presented results to the supervising team.
- Full Stack Developer (Introductory Internship) | Asment Temara** July 2025
 - Designed a web application for centralized IT asset management (React.js).
 - Developed a secure RESTful API and designed the database schema (Spring Boot, MySQL).
 - Implemented authentication and dynamic equipment management (Spring Data JPA).
 - Took part in unit testing and bug fixing prior to production deployment.

Projects

- VERITAS AI | Multimodal Fake News Detection** Code
 - Textual credibility analysis (Arabic) via Transfer Learning and AraBERT (Python).
 - Image classification: distinguishing real images from AI-generated ones (EfficientNet).
 - Authenticity verification of real images to detect tampering (ELA, Deep Learning).
 - Interactive dashboard for monitoring reliability scores (React.js).
- ENROLLHUB | Microservices-based University Management** Code
 - Scalable microservices architecture with API Gateway and Service Discovery (Spring Boot, Eureka).
 - Built a system designed to support large-scale data flows.
 - Managed containerization and data persistence (Docker, MySQL).
- CRYPTOANALYZER | Decryption and Statistical Analysis** Code
 - Automatic decryption of texts and PDF/DOCX files with cipher type detection (Java).
 - Generated detailed statistics and frequency analysis of encrypted texts.
 - Integrated an AI chatbot for user assistance (Gemini API).
 - Ergonomic desktop interface based on the MVC architecture (JavaFX, SQLite).

Technical Skills

- Languages:** Java, PHP, Python, C++, C, HTML, JavaScript, CSS, PL/SQL.
- Frameworks:** Spring Boot, Laravel, Flask, React, Node.js, Express.js, Bootstrap, JavaFX.
- AI & Data Science:** NumPy, Pandas, Scikit-learn, TensorFlow, Keras, AraBERT, EfficientNet.
- Tools:** Git, Docker, Linux, Visual Studio, IntelliJ IDEA, Jupyter Notebook, Excel.

Soft Skills

- Project Management (Agile), Teamwork, Technical Writing, Problem Analysis, Adaptability.

Certificates

- JavaScript Algorithms and Data Structures** – freeCodeCamp View
- AWS Cloud Practitioner** – KodeKloud View
- Learn PHP and MySQL for Web Development** – Udemy View
- Build Chat Applications with OpenAI and LangChain** – 365 Data Science View

Languages

- Arabic:** Native | **French:** Fluent | **English:** Intermediate

Interests

- Reading:** Passionate about Arabic-language science-fiction novels.
- Photography:** Enjoys landscape and visual exploration photography.
